

Nofisol Europe BV

Plan of increasing use of post-consumer recycled and/ or responsibly sourced renewable content

Nofisol works with suppliers that meet high recycled content standards, (we aim for 10% recycled content for stone wool). The current amount of recycled content in our products is 9%. That is the maximum feasible with the suppliers we work with due to a weaker market situation they have explained to us. In order to achieve the recycled content that we establish as a minimum we will implement the following actions:

- We will ask our suppliers to think of suitable solutions to achieve the requested 10%
To be investigated and discussed before the end of 2027 (+ any solutions etc.)
- Investigate other suppliers with similar materials;
To be investigated and discussed before the end of 2027 (+ any solutions etc.)

Materials we would like to investigate the development regarding renewable content:

- Stone wool – investigation possible development + solutions by the end of 2027
- Plastic wrap foil – investigation possible development + solutions by the end of 2024/ beginning of 2025.
- Carton corner protectors - investigation possible development + solutions by the end of 2024/ beginning of 2025.
